

AI-Powered Customer Support & Service Automation Using Salesforce

Problem–Solution Fit Canvas

Project Name	AI-Powered Customer Support & Service Automation Using Salesforce
Section	Project-Specific Details
1. Customer Segments	• Online customers • Support executives • Service managers
2. Problems / Pains	• Slow case resolution • Manual assignment • Inconsistent customer updates
3. Triggers to Act	• Product damage • Warranty claims • Delivery issues
4. Emotions	Before: Frustrated and uncertain After: Confident and satisfied
5. Available Solutions	Traditional CRM systems with manual workflows and limited automation.
6. Customer Limitations	Limited visibility into case status and delayed responses.
7. Behavior	Customers repeatedly check status and contact support when updates are delayed.
8. Channels	Online: Salesforce Experience, Email Offline: Support representatives
9. Root Cause	Manual processes, scattered information and lack of AI-driven automation.
10. Proposed Solution	Implement Salesforce CRM with Record-Triggered Flows, Queues, Prompt Builder, Agentforce, AI summaries, Reports and Dashboards to automate customer support.
