

AI-Powered Customer Support & Service Automation Using Salesforce

Code Layout, Readability and Reusability

Project Name	AI-Powered Customer Support & Service Automation Using Salesforce
Maximum Marks	5 Marks

This document evaluates the Salesforce solution with respect to metadata organization, readability, maintainability and reusability. The project follows Salesforce development best practices using modular automation, reusable components and structured documentation.

S.No	Code Quality Parameter	Description	Status	Remarks
1	Consistent Naming	Objects, fields and flows follow clear naming.	Yes	Salesforce naming standards used
2	Proper File Structure	Metadata organized logically.	Yes	GitHub repository structured
3	Meaningful Names	Custom objects and fields are descriptive.	Yes	Customer__c, Orders__c etc.
4	Documentation	README and project documentation maintained.	Yes	GitHub documentation complete
5	Modular Design	Automation split into reusable flows.	Yes	Reusable Flow architecture
6	Reusable Components	Prompt Builder and Queues reused.	Yes	High reusability
7	No Redundant Logic	Duplicate automation avoided.	Yes	Optimized configuration
8	Error Handling	Validation Rules and Flow fault paths.	Yes	Improved data integrity

Reusable Components and Overall Assessment

Component	Technology	Where Reused	Reusability
Customer Management	Salesforce Custom Objects	Customer operations	High
User Case Flow	Record-Triggered Flow	Case automation	High
Queue Assignment	Salesforce Queues	Case routing	High
Prompt Builder	Einstein AI	AI summaries	High
Agentforce	Salesforce AI	Support assistance	High
Reports & Dashboards	Analytics	Business reporting	High

Aspect	Rating	Comments
Code Layout & Structure	5/5	Well-organized Salesforce metadata
Readability	5/5	Clear naming and documentation
Reusability	5/5	Reusable flows and AI components
Documentation	5/5	Comprehensive GitHub documentation
Overall Score	5/5	Enterprise-quality implementation
