

AI-Powered Customer Support & Service Automation Using Salesforce

Demonstration of Proposed Features

Project Name	AI-Powered Customer Support & Service Automation Using Salesforce
Maximum Marks	1 Mark

Demonstration of Proposed Features

This document presents the features proposed during the project planning phase and demonstrates their successful implementation in the Salesforce CRM application. Each feature has been tested and verified to ensure that the application meets the functional requirements and business objectives.

Feature Demonstration

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Customer Management	Create, update, view and manage customer records using the Customer object.	Implemented	Yes	Successfully demonstrated
2	Merchandise Management	Maintain merchandise details including product information and availability.	Implemented	Yes	Working as expected
3	Order Management	Create customer orders and maintain order details with automated calculations.	Implemented	Yes	Successfully tested
4	User Case Management	Create and manage customer complaints, service requests and case tracking.	Implemented	Yes	Successfully demonstrated
5	Validation Rules & Record-Triggered Flows	Enforce business rules and automate workflows for data consistency.	Implemented	Yes	Automation executed successfully
6	Prompt Builder, Agentforce, Reports & Dashboards	Generate AI summaries, provide AI assistance, and visualize business insights through reports and dashboards.	Implemented	Yes	AI functionality successfully demonstrated

Feature Implementation Summary

Metric	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%

Demonstration Summary

The project demonstration successfully showcased all planned functional modules of the AI-Powered Customer Support & Service Automation Using Salesforce application. The Salesforce Lightning application efficiently manages customer information, merchandise records, orders, and customer service cases. Business logic has been automated using Validation Rules and Record-Triggered Flows, ensuring data accuracy and streamlined operations.

Advanced AI capabilities were demonstrated using Prompt Builder and Agentforce, enabling automated AI-generated case summaries and intelligent customer support assistance. Reports and Dashboards provided real-time business insights, helping administrators monitor system performance and customer activities.

All proposed features were fully implemented, tested, and successfully demonstrated without critical issues, resulting in an overall implementation rate of 100%.
