

AI-Powered Customer Support & Service Automation Using Salesforce

Customer Problem Statement

Project Name	AI-Powered Customer Support & Service Automation Using Salesforce
--------------	---

The following problem statements capture the challenges faced by customers and support executives. These challenges motivated the development of the Salesforce AI-powered customer support solution.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer experiencing a product issue	Receive quick and accurate support	Support requests take longer than expected	Cases are manually reviewed and assigned	Frustrated and dissatisfied
PS-2	A customer with a warranty claim	Know whether my product is eligible for warranty service	I do not receive immediate updates	Information is spread across different records	Confused and uncertain
PS-3	A customer support executive	Resolve customer cases efficiently	Every case must be read manually	There is no AI-generated summary or automatic routing	Less productive and overwhelmed

Conclusion: These problems are addressed through Salesforce automation, Queues, Record-Triggered Flows, Prompt Builder, Agentforce, and Reports & Dashboards.
